California, USA**

Onstream Systems' RapidRedact ensures censored text remains unreadable

RapidRedact prevents such embarrassing incidents as the recent publication of classified sections of official US military inquiry into the accidental killing of an Italian agent in Baghdad.

David Kelly, President and CEO of Onstream Systems, felt compelled to comment on recent media reports on the publication of classified text the US authorities censored from their 40 page report on the killing by US forces of an Italian Intelligence Agent at an Iraqi checkpoint.

The current embarrassment over the publication of censored portions of the report graphically demonstrate that the redaction (blanking out) methods most commonly used on electronic documents don't work.

"We developed RapidRedact™ as a tool to prevent such incidents occurring", said Mr. Kelly. "It is an economical method of insuring redacted information is, and remains, redacted. In addition, it completely removes any record of text or authors' changes and irrevocably cleans all hidden code or data from 'behind' the document. With RapidRedact, people can snoop or hack to their heart's content, but the information cannot be revealed"

RapidRedact was developed by Onstream Systems, to provide a failsafe method of blanking out sensitive information from electronic documents before they are released for publication.

Documents that are stored and passed on electronically can carry with them every text change and annotation from the time of first creation. RapidRedact provides a fast, simple method of redacting sensitive information from Word, PDF's, and image documents, and then allowing them to be sent electronically, secure in the knowledge that only permitted data has been published.

RapidRedact is available now. For more information on the product and for pricing, please visit www.rapidredact.com. A short demonstration of how RapidRedact works is also available at: <http://www.rapidredact.com/30secdemo.asp>. To speak with the US sales office, please call Mike Gee in the USA on (510) 813 0925

About Onstream Systems

Founded in 1987, Onstream Systems, a software development company, also delivers the Trapeze™ suite of sophisticated solutions for working with large, hard-to-handle documents such as folders full of documents or maps and plans - at the local desktop or streamed over the web. Based in Wellington, New Zealand, Onstream has developed and marketed Trapeze through partnerships in Europe, Asia/Pacific, UK and the USA. For more information visit the company website at <http://www.onstreamsystems.com>
